

To thoroughly learn the Release, Control and Validation processes within the ITIL® Service Lifecycle

Course Description

The ITIL® intermediate level course, Release, Control and Validation (RCV), trains the candidate in the topics relevant to the correct execution of the transition of an IT service into the live environment, or out of it. It covers aspects of release, control and validation of the changes involved in the transition of a service.

The candidate who takes this course will be prepared to apply the service management best practices relevant to the processes contained in the Service Transition stage in his/her work environment, besides he/she will have the knowledge needed to take the official certification exam.

Objectives

To certify that the participant has obtained the technical level of knowledge and skills required for the detailed execution and implementation of the following processes:

- Change Management
- Service Asset and Configuration Management
- Service Validation and Testing
- Release and Deployment Management
- Request Fulfilment
- Change Evaluation
- Knowledge Management

Audience

This course is aimed to:

- IT professionals.
- Business managers.
- Business process owners.
- Individuals who require a deep understanding of the Release, Control and Validation processes.
- Operational staff involved in any RCV process.
- Individuals who have attained the ITIL Foundation Certificate and wish to advance to higher level ITIL certifications.

Prerequisites

The participant who takes this training course and the certification exam must hold the ITIL® Foundation certificate. Certificate must be presented as evidence for exam registration.

It is also highly recommended that the participant:

- Is familiar with the IT terminology and understands the context of Release, Control and Validation within his/her own business environment.
- Has any experience in the service management field within a service provider environment.

Course characteristics

The course has the following characteristics:

- It is based on AXELOS' syllabus for the ITIL® Intermediate Release, Control and Validation Certificate.
- It is structured in thematic units, with a balance between theory and practice.
- Includes a sample exam, prior to the certification exam.
- Includes an official certification exam issued by AXELOS.
- A certificate of course completion is delivered.
- The length is 5 days.
- 10 additional hours of personal study during the course are recommended.
- Has a minimum requirement of 6 and a maximum of 25 participants.

Certification exam characteristics

The certification exam has the following characteristics:

- Includes 8 scenario-based questions.
- Each question has 4 possible answers with values allocated as follows: the best option is worth 5 points, the second best is worth 3, the third best is worth 1, and the last option is a distractor with 0 value.
- The length is 90 minutes.
- A minimum of 28 out of 40 questions or 70% is required to pass.
- It can be paper-based or web-based. When it is paper-based, the results will be notified to the participant afterwards through email. When it is web-based, the participant will get the results immediately after finishing the exam.
- It is a closed-book exam.
- The participants who do not pass the exam can take it again any times with an extra cost.

Topics

The course topics are the following:

- | | |
|-----------------------------------------------|--------------------------------------------------|
| 1. Introduction | 7. Change Evaluation |
